Other

Restoration Warehouse

1079 Elm St., Dubuque, IA 52001, Phone: (563) 585-2933

Email: info@restorationwarehouse.net

Architectural Elements

Hazardous things to look for prior to Demolition:

Poly-Chlorinated BiPhenyls (PCBs) - mainly found in electrical equipment such as light ballasted, transformers, transistors, capacitors

Lead—mainly found in older buildings Pre-1978.

Lead can be found in the following areas: Lead based Paint (woodwork, and walls), Lead-Acid Batteries (lighting exit signs security systems), Lead Flashing molds and roof vents, Lead Pipes and solder.

Chlorofluorocarbons (CFCs)—man-made refrigerants these can be found in Fire Extinguishers, air conditioners (rooftop, room, and central), Walk in Coolers (refrigeration or cold storage areas), Water Fountains and Dehumidifiers, Heat Pumps.

Asbestos—Found in Boiler rooms (HVAC duct insulation, etc) , Flooring (Vinyl flooring, etc), Electrical (Panels and wiring insulation), Pipe and other insulation (Aircell, Millboard, Blown-in insulation, etc), Surfacing Materials (some types of plaster), Roofing (Shingles, Felt, Base Flashing), Cement materials (transite), Ceiling Materials

All items listed here should be handled following Federal, State and Local guidelines. These are all considered to be Hazardous Waste.
